## Abstract of JP2000067522

**PROBLEM TO BE SOLVED:** To improve the use feeling of a user at the time of an interactive operation. **SOLUTION:** Data and priority flags indicating pre-read priority orders of these data are recorded on an optical disk 62. A PBC (playback control) interpreter part 64 reads data from the disk 62 whose priority is high based on the priority flag before an operation instruction is inputted to it from a remote commander 3 via a user input accepting part 69 by a user. Then, when there is an operation instruction from the user, the data preread immediately is interpreted by the PBC interpreter part 64 and a reproducing processing is executed based on the interpreted result.
